Local Service. Global Capabilities.

COMPONENT OBSOLESCENCE MANAGEMENT WITH A PROACTIVE VERSUS REACTIVE APPROACHES

Managing components and suppliers is more critical than ever as obsolescence, counterfeit, and non-compliance risks continue to grow and can be categorized within two distinct realms: **Proactive versus Reactive**

Reactive approach to obsolescence management relies on taking action once a component event such as the release of a Product Discontinuance Notice (PDN) has already occurred, advising the OEM of an impending change in the component's lifecycle. This approach is fraught with potential error and late information becoming available to the OEM.

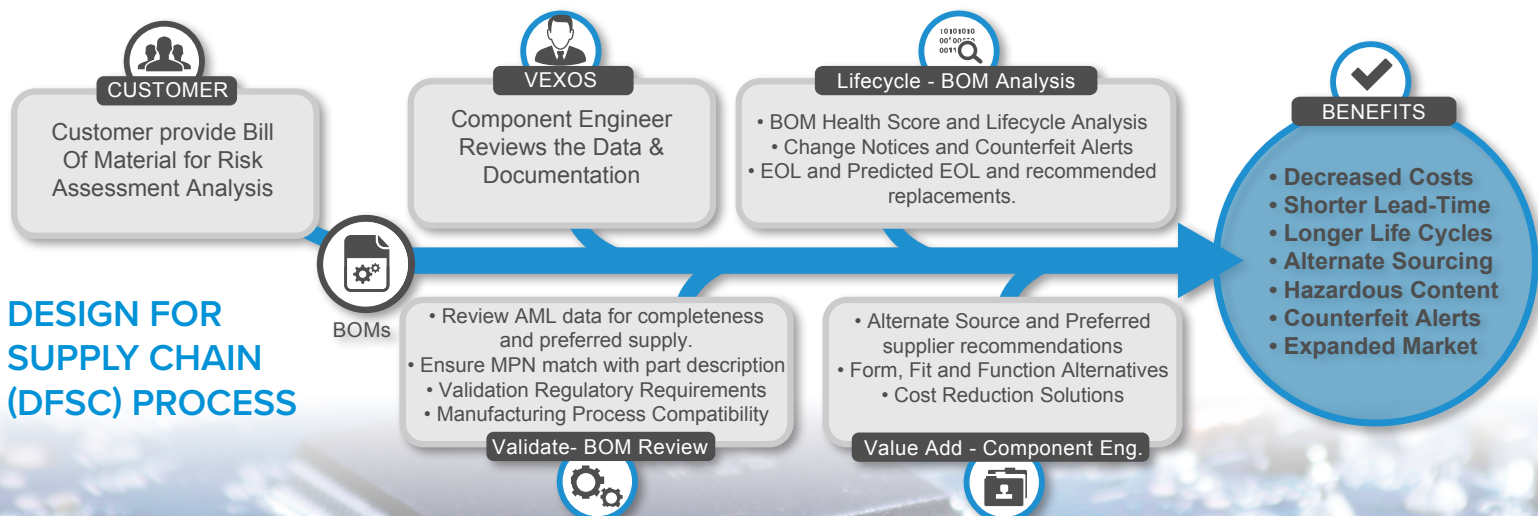

Proactive approach focus on predicting component obsolescence prior to the issuance of the PDN. OEMs using a proactive approach to obsolescence management assign risk grades to each component and have appropriate measures in place to deal with the lifecycle change of a component in the future.

PROACTIVE - DESIGN FOR SUPPLY CHAIN SERVICES

Our Design For Supply Chain (DFSC) Services uses "Risk Management Analysis" tools and component engineer's expertise, allowing our customers immediate risk assessments on specific BOM's as needed. The tool forecasts component obsolescence and conduct's a risk analysis on entire Bill of Materials using advanced algorithms designed specifically to manage component lifecycles. This tool also allows for finding immediate potential cross references that match form, fit and function to your components if and or when required.

DFSC (Design for Supply Chain)

- Vexos Engineering will proactively create internal part number with associated approved manufacturers with revision control to allow Product Lifecycle Management through the product evolution.
- Utilizing component engineering capabilities, the Approved Manufacturer List (AML) will be scrubbed to identify single sourced AML components, expand on existing AML and source preferred suppliers for lower cost, high value.
- Global Procurement will engage strategic suppliers and assist with part design feedback for improved yield and costs and review critical parts in the FMEA to evaluate risk and mitigation plans.
- As part of our standard review, Component Engineering will provide validation and selection of orderable part numbers to support full automation for high quality production.
- Certificate of Conformance, component level lot code traceability and reporting is integrated with our business systems to support startup and sustaining production needs as per ISO-13485.

RISK MANAGEMENT ANALYSIS TOOLS AND COMPONENT ENGINEER'S EXPERTISE:

BOM REVIEW/ANALYSIS

- Identifies problematic components such as Obsolete, End-of-Life, Not Recommended for New Design, Single Source, as well as the Years before to End of Life information of the components.

COMPONENT ALTERNATE SOURCING & BOM COST REDUCTION

- Propose alternates for Single Source, Obsolete, End-Of-life
- Optimize BoM and provide significant Cost Savings for existing Product Design and New Product Development

OBSOLESCENCE MANAGEMENT & COMPONENT AVAILABILITY

- Monitor Product Change Notification and Component life Cycle (Obsolescence, End-of-life and component changes), providing the customers first hand information about the changes affecting their BoM.

ENVIRONMENTAL COMPLIANCE

- Ensures product complies with the latest and updated Environmental Compliance Directive such as ROHS and REACH and other applicable directives.

TRADE /EXPORT COMPLIANCE

- Verify if the product complies with Conflict Minerals Law (US) by checking each component in the BoM are Conflict Minerals free as required by the law.

Dependable Quality

Vexos achieves the highest quality levels by utilizing the latest equipment, processes, quality standards and certifications across the organization; to enable a flawless launch of each individual program.

- Rigorous selection of sub-contractors or partner factories
- Performance evaluation and monitoring through regular audits of the factories
- Continuous training for personnel at all levels
- Document control to safeguard your data and release of technical documents
- Sample approval process including production part approval process (PPAP)

Certifications

- ISO 9001:2015
- ISO 13485:2016
- ISO 14001:2015
- FDA registered
- OHSAS 18001:2007
- RoHS and Non-RoHS
- IATF 16949:2016
- CGP certification
